

Life Transfusion

Liquid Mineral Complex

With Exclusive "Electro-Plasma-Peptides" To Transform the Life Process Within the Body

Life Transfusion Liquid Mineral Complex is a true "transfusion of life" in a highly concentrated liquid form. It contains all known elements that were surmised to have been present when the first forms of life were created in the ancient, purified oceans billions and billions of years ago.

Ingredients: Special, Ionic-Form, Purified Ocean Mineral Complex of Magnesium, Potassium, Sodium, Iodine, Cobalt, Manganese, Iron, Boron, Strontium, Iron, Copper, Zinc, Calcium, Lithium (all-natural, non-pharmaceutical), Phosphorous, Chlorine, Sulfur, Silicon, Nickel, Chromium, Vanadium, Selenium, Barium, Titanium, Gallium, Bismuth, Silver, Gold, Tin, Molybdenum, Zirconium, Samarium, Sulfate, Ytterbium, Titanium, Arsenic (naturally occurring, trace amounts), Nitrogen, Rubidium, Cesium, Thorium, Lanthanum, Scandium, Radium, Germanium, Carbon, Yttrium. Plus all other trace elements found naturally in purified ocean water; Chlorophyll from Micro-Milled Chlorella; Peptides and Amino Acid concentrates from an ocean source; Mega-B Vitamin Complex.

IONIC, OCEAN-MINERAL COMPLEX.

(Major minerals and their main actions described)

Magnesium is essential for heart action and conversion of Calcium into bone.

Sodium is essential for energy production.

Potassium is essential for heart contraction and supports Magnesium to create a heartbeat. Also needed for mental and physical energy.

Selenium is an anticancer, free-radical fighter.

Zinc is a trigger for immune system action by producing vital T-cells.

Iodine is essential for health, normalized thyroid action.

Calcium is essential for overall heart contraction and also for bone, ligament and cartilage formation.

Boron is essential for testosterone production and bone formation.

Strontium is essential for strong bone density.

Lithium is necessary to avoid mental depression.

Copper helps to regulate Iron and also for helps skin formation.

Silicon is a basic building block of all life formation and also for skin, hair, nail health. Also needed for strong bone formation and partners Calcium.

Silver acts as a natural antibiotic.

Gold acts as a natural anti-inflammatory.

Germanium triggers essential production of alpha, delta and gamma interferon's within the body to fight diseases such as leukemia and cancer.

Chromium regulates the pancreas and production of insulin. Also needed to lean body bass, burn fat and fight the herpes virus. Essential for blood sugar regulation.

Vanadium mimics the action of insulin in the body.

CHLOROPHYLL.

The purest form of Chlorella (an ocean sourced vegetable and algae) that has been "micromilled" to protect all the cellular components for total assimilation by the body. Many forms of Chlorella exist but are poorly milled and lose much of their potency. This is possibly the most powerful form in existence today. Chlorophyll is identical to hemoglobin in our blood with one exception--Hemoglobin has Iron at the center of its' atom while Chlorophyll has Magnesium. Without Hemoglobin, our body ceases to operate as it is needed to transport oxygen throughout our blood, our cells and our tissues. Chlorophyll is the catalyst in Nature that transforms organic matter into life through the use of sunlight and photosynthesis. It is needed for DNA and RNA production, detoxification of heavy metals and radiation.

PEPTIDES AND AMINO ACIDS FROM AN OCEAN SOURCE.

Peptides and Amino Acids are the building blocks of protein. Without them, we would have no actual "body" of muscles, skin, tissue, nails, hair. This ocean-sourced peptide/amino acid complex is unique in that it requires no digestion by the body. It is 100% assimilated within seconds as it is in a form that is identical to that of the human body. It is sourced from the pristine

waters of the New Zealand and the Antarctic Ocean. These ultra-powerful, life-generating and life-stimulating elements combine with the ionic, ocean-minerals to form a "cocktail of life" that the body needs every microsecond to keep the life process flowing, uninterrupted.

MEGA-B VITAMIN COMPLEX - Vitamin B6; Pantothenic Acid, Niacin and Thiamin.

These are the essential vitamins along with the minerals and peptides and Chlorophyll described above, that scientists studying the events surrounding the formation of this planet billions of years ago, to have been necessary for the first forms of life to be created. **Vitamin B6** triggers peptides into life. Also balances hormonal systems, boosts the immune function and needed for growth of new cells. A vital component of red blood cell production. **Pantothenic Acid** is needed for the body to produce Choline, the "intelligence force" amino acid as well as control cholesterol, homocysteine levels and complement Vitamin B6 in its actions. **Thiamin** is known as the "morale vitamin" because of its beneficial effects on the nervous system and mental attitude. Promotes proper growth in children, aids carbohydrate utilization for energy and supports the immune system. **Niacin** - Needed for energy production, control of cholesterol, hormone synthesis and good digestion. Helps to mobilize fat from the adipose tissue so that it can be burned as energy.

Item #1000 - 8fl oz Bottle
